

Solomon Olufelo

solomonolufelo@outlook.com · (289) 233-8317 · github.com/solufelo · linkedin.com/in/solomonolufelo

Technical Skills

Languages:	C/C++ (C++17/20), Java, Python, JavaScript, TypeScript, GLSL, SQL
Web Development:	React, Next.js, Node.js, Express.js, MongoDB, PostgreSQL, Prisma, TailwindCSS
Graphics & 3D:	OpenGL, SFML, Box2D, Three.js, Blender API, GLM (3D Math)
Developer Tools:	Git, Docker, CMake, GDB, VS Code

Experience

Athletics & Recreation Videographer <i>Wilfrid Laurier University, Waterloo, ON</i>	Aug. 2023 – Present
• Capture and produce high-quality video content for university athletic events and recreational activities. • Operate professional video recording equipment, ensuring optimal framing, focus, and audio quality. • Edit and post-produce footage to create engaging highlight reels and promotional videos.	
Freelance Developer & Creative Producer <i>Independent Contractor</i>	2020 – Jan. 2026
• Achieved top-tier freelancer status with a 4.8-star rating across 1,400+ completed orders and 700+ client reviews. • Scaled an independent business to over \$30K in revenue, serving a global clientele with high-quality deliverables. • Managed and executed a diverse portfolio of client projects, combining custom web development commissions with multimedia production (audio, graphic design, and video editing).	

Projects

Real-Time 3D OpenGL Engine <i>C++, OpenGL 3.3, GLSL, GLFW, GLAD</i>	2025
• Developed a real-time 3D rendering engine implementing a custom programmable shader pipeline and camera system. • Implemented classic illumination models including Phong lighting, directional lights, and ambient, diffuse, and specular shading. • Integrated the Assimp (Open Asset Import Library) to parse and render complex 3D OBJ models with texture coordinate mapping.	
Physically-Based CPU Raytracer <i>C++17, STL, Vector Math</i>	2025
• Built a CPU-based path tracer from scratch, implementing ray-object intersection algorithms for sphere geometries. • Programmed realistic material shaders including Lambertian diffusion, specular metal reflections, and dielectric glass refraction. • Implemented anti-aliasing, global illumination light transport, and depth-of-field defocus blur effects.	
StudyOS – AI-Powered Learning Platform <i>Wasp, React 18, TypeScript, OpenAI API</i>	2025
• Developed a full-stack study application with spaced-repetition (Leitner system) for flashcard learning. • Integrated the OpenAI API for automated PDF-to-flashcard generation with quality controls. • Built a Pomodoro timer, task management, and focus training games with progress tracking.	
Laurier Football Shell Game – Blender Add-on <i>Python, Blender API, 3D Geometry Math</i>	2025
• Developed a production-ready 3D animation automation tool in Python to streamline asset creation for athletic presentations. • Engineered smart animation algorithms using sine wave functions for natural, non-linear movement. • Built an auto-scaling system to detect object dimensions and adjust animation parameters dynamically, complete with a custom UI panel.	

Education

Bachelor of Computer Science <i>Wilfrid Laurier University, Waterloo, ON</i>	Sep. 2021 – Spring 2027 (Expected)
<i>Relevant Coursework:</i> Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Graphics, Linear Algebra	

Awards

- Bronze & Silver Medalist — Skills Ontario Competition (3D Animation, Blender), 2018
