

Solomon Olufelo

solomonolufelo@outlook.com · (289) 233-8317 · github.com/solufelo · linkedin.com/in/solomonolufelo

Technical Skills

Systems & Languages: C/C++ (C++17/20), Java, Python, JavaScript, TypeScript, GLSL, Bash, POSIX API, SQL
Web & Graphics: React, Next.js, Node.js, Express, MongoDB, PostgreSQL, OpenGL, Three.js, TailwindCSS
Security & Tools: Git, Docker, CMake, GDB, Linux, Virtualization, threat modeling, credential isolation

Experience

Athletics & Recreation Videographer

Aug. 2023 - Present

Wilfrid Laurier University, Waterloo, ON

- Capture and produce high quality video content for university athletic events and recreational activities.
- Operate professional video recording equipment, ensuring optimal framing, focus, and audio quality.
- Edit and post produce footage to create engaging highlight reels and promotional videos.

Freelance Developer & Creative Producer

2020 - Jan. 2026

Independent Contractor

- Achieved top tier freelancer status with a 4.8 star rating across 1,400+ completed orders and 700+ client reviews.
- Scaled an independent business to over \$30K in revenue, serving a global client base with custom web applications.
- Developed and deployed custom full stack architectures for global clients, enforcing secure data storage, credential isolation, and environment reproducibility.

Projects

Real-Time 3D OpenGL Engine | C++, OpenGL 3.3, GLSL, GLFW, GLAD

2025

- Developed a real-time 3D rendering engine implementing custom programmable shader pipelines and camera systems.
- Optimized rendering performance using vertex buffer objects (VBO) and index buffer objects (EBO) in Modern OpenGL.
- Integrated the Assimp library to parse and render complex 3D assets with real-time Phong illumination model shading.

Light Years - C++20 Space Shooter Engine | C++20, SFML, CMake, Box2D, vcpkg

2025

- Engineered a 2D space shooter game engine in C++20, utilizing a fixed-timestep application loop for synchronized physics and rendering updates.
- Configured cross-platform native compilation pipelines using CMake Presets and managed dependencies via vcpkg integration.
- Implemented object pooling design patterns for high-frequency entity spawning to reduce runtime heap allocation overhead.

findYOU - Cybersec and Systems Productivity OS | Python, React, Docker, Playwright

2026

- Developed a local productivity engine featuring a Python http backend, an Eisenhower matrix planner, and a Pomodoro timer.
- Built a security-isolated crawling script using Playwright and Python-JobSpy to scrape and aggregate active job data.
- Implemented local vault write-backs to Markdown files and containerized the entire ecosystem with Docker for deployment.

JobScanner Pro - Automated Aggregator & Auto-Apply | Python, Playwright, SQLite, Tkinter

2025

- Developed a multi-platform job aggregation and form auto-fill automation system in Python utilizing Playwright.
- Built smart filtering, deduplication, and application status tracking using an SQLite database backend.
- Designed a dual CLI and GUI (Tkinter) interface to streamline search configurations, exports, and automated applications.

Education

Bachelor of Computer Science

Sep. 2021 - Spring 2027 (Expected)

Wilfrid Laurier University, Waterloo, ON

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Graphics, Linear Algebra

Awards

- Bronze & Silver Medalist - Skills Ontario Competition (3D Animation, Blender), 2018
